Now is the time to propare for raising early chickens. The first thing necessary is to force the hens that you intend to have do the sitting to lay freely. The eggs to be used for hatching may be prouved from hens which begin laying a few weeks later in the season, but as the desire for incubation does not come until the few has completed her hatch of eggs. the fowl has completed her batch of eggs, it is plain that the whole matter of getting chickons started early depends on the early laying of the sitting stock.

When there are offers to sit, the eggs ished conviction—you are taking the chosen for that purpose will be all the course that will most surely destroy it; better for coming from that portion of the back out of their treaty obligations. That they have asked our Government whether we propose to at and by our "case" as submitted to the Geneva arbitrators we know. We also know that the answer they received was in decisive terms, to the effect that we will not recede from the position we have taken. But this is all that is known positively. England is aware that we will insist on having all our claims referred to the tribuual of arbitration, and it remains with hor to decide whether sha will acquiesce in our determination, or mainly decides the fate of the chicks, is greater when the parent fowls have not been exhausted by the productin during two or three previous months of thirty,

OR SAGE'S CATARRH REMEDY.

It is the only form of instrument yet invented with which fluid medicine can be carried kink up and perfectly applied to all pairs of the affected in sal passages, and the chambers or cavities communicating therewith, in which forces and ulcers frequently exist, and from which the cataribalidischarge generally proceeds. The want of success in treating Catarich heretofore has arisen largely from the impossibility of applying remedies to these castites and chambers by any of the ordinary methods. This obstacle in the way of effecting curves entirely overcome by the invention of the Donche. In using this instrument, the Fluid is carried by its own weight, (no snelling, forcing or pumping being required.) in one nostill in a full gently flowing stream to the highest portion of the nasal passages, passes into and thoroughly cleans ceall the tubes and chambers connected therewith, and flows out of the opposite nostil. Itsee is pleasant, and so simple than a child can understand it. Full and explicit directions arut, and so simple that a child can understand.
